IcedTea-Web Release Notes

Version 1.8.4

Mar 04, 2021

Table of Contents

Overview

IcedTea-Web is an alternative implementation of JSR-56, better known as Java Web Start, that is developed as an open source project and hosted on GitHub.

Azul provides binary and source packages of IcedTea-Web for Linux, Windows, and macOS. In addition to incorporating the latest upstream changes from the IcedTea-Web project, Azul tests IcedTea-Web packages and addresses issues identified during testing.

Azul builds of IcedTea-Web are available free of charge and can be downloaded from https://www.azul.com/downloads/icedtea-web-community/. The builds of IcedTea-Web are compatible with JDK 8 and JDK 11.

NOTE	macOS users should download the portable package format. A portable package is a platform-independent package that includes jar files and Unix shell scripts (`javaws.sh`) and batch files (`javaws.bat`). Because macOS is Unix-based, you can use the package on macOS.

IcedTea-Web 1.8.4

Released: January 26, 2021
