

## Zulu Release Notes

Zulu 13.35 (13.0.5.1) for Arm v8 64-bit

Release Date: October 20, 2020

Document Version: 1.5

Last Modified: November 17, 2020

## Revision History

Revision	Date	Description
1.0	October 20, 2020	Initial version of the document.
1.1	October 21, 2020	Updated the description of the new property "jdk.jndi.ldap.mechsAllowedToSendCredentials."
1.2	October 23, 2020	Updated In-Depth Non-CVE Security Fixes table.
1.3	October 30, 2020	Updated the description of CA builds. Increased the font size in the CVE table.
1.4	November 6, 2020	Added information to the What's New section: Azul Zulu 13 off-cycle updates released to align with OpenJDK off-cycle November 2020 updates.
1.5	November 17, 2020	Added information to the What's New section: <a href="#">JDK-8214440</a> to November 2020 OpenJDK Bug Fixes.

# Zulu Overview

Azul Systems® Zulu® is an implementation of the Java Standard Edition (SE) based on OpenJDK and optimized for embedded devices. Zulu includes Java Development Kit (JDK) that provides a collection of tools for application development.

# What's New

## November 6, 2020

### Zulu 13.35.100 release

#### Summary

This Azul Zulu™ release is an alignment with the corresponding OpenJDK off-cycle update releases that are happening in November 2020. The primary motivation for these off-cycle OpenJDK updates is fixing a regression that introduced a crashing bug (in the C2 compiler, [JDK-8250861](#)) in the October OpenJDK update of the various projects.

The latest Azul Zulu™ builds that fix this regression are now available for download from regular locations including the Azul website. These builds contain all fixes and patches released on November 6, 2020, in coordination with OpenJDK.

The details of the released Zulu versions are specified in the following table:

Java SE Version	Java Update Type*	Zulu Version	JDK Version	Based on**	
				Zulu Version	JDK Version
13	PSU	13.35	13.0.5.1+1	13.35	13.0.5+3

#### \*Java Update Type:

- **CPU** (Critical Patch Updates) contain fixes to security vulnerabilities and critical bug fixes. Zulu CPU releases are generally based on prior-cycle PSU releases, with only security fixes applied. They provide a low-risk vehicle for the potentially urgent deployment of security fixes when issues of sufficient severity arise. CPU releases are available in SA distributions.
- **PSU** (Patch Set Updates) incorporates all of fixes in the corresponding CPU, as well as additional non-security bug fixes. Zulu PSU releases incorporate both security fixes and other accumulated changes that align the release contents with the associated OpenJDK project quarterly release. PSU releases are available in SA and CA distributions.

**\*\*Based on:** Zulu CPU releases are based on prior-cycle PSU releases. Zulu PSU releases are based on the current-cycle CPU releases.

**\*\*\*Includes Support for JavaFX Version:** Information is relevant for the builds that include JavaFX support.

## Resolved Issues

### OpenJDK Bug Fixes

OpenJDK Patch ID	Zulu Version	Synopsis	CPU/PSU
<a href="#">JDK-8214440</a>	8.50	Idap over a TLS connection negotiate failed with "javax.net.ssl.SSLPeerUnverifiedException: hostname of the server " does not match the hostname in the server's certificate"	PSU
<a href="#">JDK-8236512</a>	8.50	PKCS11 Connection closed after Cipher.doFinal and NoPadding	PSU
<a href="#">JDK-8249266</a>	15.28	Bump release strings for JDK 15.0.1	PSU
<a href="#">JDK-8250861</a>	15.28, 13.35, 11.43, 11.42, 8.50, 8.49	Crash in MiniNode::Ideal(PhaseGVN*, bool)	PSU + CPU
<a href="#">JDK-8255781</a>	11.43	Bump patch update version for OpenJDK: jdk-11.0.9.1	PSU
<a href="#">JDK-8255933</a>	13.35	Bump patch update version for OpenJDK: jdk-13.0.5.1	PSU

## October 20, 2020

### Zulu 13.35.50 release

### Summary

Azul Zulu distribution types:

**SA** are tested, certified, and commercially supported Azul Zulu builds of OpenJDK whereby Azul ensures that software that uses the Accessible

APIs of the product is not required to carry a specific license and that such use does not contaminate the code or intellectual property of such software with any license requirements.

**CA** are Azul Zulu builds of OpenJDK that are free to download and use.

The details of the released Zulu versions are specified in the following table:

Java SE Version	Java Update Type*	Zulu Version	JDK Version	Based on**	
				Zulu Version	JDK Version
13	PSU	13.35	13.0.5+3	13.34	13.0.4.0.101+5

#### \*Java Update Type:

- **CPU** (Critical Patch Updates) contain fixes to security vulnerabilities and critical bug fixes. Zulu CPU releases are generally based on prior-cycle PSU releases, with only security fixes applied. They provide a low-risk vehicle for the potentially urgent deployment of security fixes when issues of sufficient severity arise. CPU releases are available in SA distributions.
- **PSU** (Patch Set Updates) incorporates all of fixes in the corresponding CPU, as well as additional non-security bug fixes. Zulu PSU releases incorporate both security fixes and other accumulated changes that align the release contents with the associated OpenJDK project quarterly release. PSU releases are available in SA and CA distributions.

**\*\*Based on:** Zulu CPU releases are based on prior-cycle PSU releases. Zulu PSU releases are based on the current-cycle CPU releases.

## IANA time zone data version

This release of Zulu comes with IANA time zone data version 2020a. For more information, see [Timezone Data Versions in the JRE Software](#). Please note that Zulu with IANA time zone data version 2020b version or later will be delivered shortly.

## Additions and Changes in Behavior

### JDK-8237990: New system and environment runtime property for LDAP context

Introduced in all Zulu versions.

The `jdk.jndi.ldap.mechsAllowedToSendCredentials` property sets the list of authentication mechanisms that are allowed to send credentials over a non-encrypted connection in the LDAP context. Possible values are:

- `all` allows all mechanisms
- (empty value) allows none
- `mech1,mech2,...,mechN` allows the given authentication mechanisms

If the property is not set, all mechanisms are allowed. Note that "none" and "anonymous" authentication mechanisms are always allowed irrespective of the property value.

In previous versions, user credentials could be sent over an unencrypted connection.

### **JDK-8245417: New runtime properties to control TLS workflow**

Introduced in all Zulu versions.

- The `jdk.tls.maxHandshakeMessageSize` property controls the maximum size limit for the handshake message. The default property value is 32768.
- The `jdk.tls.maxCertificateChainLength` property controls the maximum length for the certificate chain. The default property value is 10.

Note that when the corresponding data size exceeds the allowed value, an exception is thrown from various parts of the JDK. For example: `The size of the handshake message <actual size> exceeds the maximum allowed size <maxHandshakeMessageSize>.`

In previous versions, the maximum handshake messages size was limited to  $2^{24}$  bytes, and there was no limit on the length of certificate chains.

### **JDK-8236862: New runtime property to control the number of interfaces allowed for Proxies**

Introduced in all Zulu versions.

The `jdk.serialProxyInterfaceLimit` property sets the implementation limit on the number of interfaces allowed for Proxies. The property range is from 0 to 65535; the default value is 65535.

In previous versions, the maximum number of interfaces was 65535 and you couldn't set a lower value.

### **JDK-8233624: New mapping rules from a Java native method name to a C native library implementation function name**

Introduced in all Zulu versions.

The JNI methods mapping rules have been changed, for details on new rules, see [Troubleshooting tips](#).

Note, if a Java class or package name for some reason begins with a digit "0", "1", "2", or "3", no native library search is performed, and the attempt to link the native method invocation throws `UnsatisfiedLinkError`.

To resolve compatibility issues, you can either set the `XX:+UseLegacyJNINameEscaping` runtime flag to skip the extra mapping check or notify your library provider to update the JNI names according to the new mapping rules and to reissue and redeploy the libraries.

# Features and Supported Platforms

## Supported Platforms

Zulu is delivered as binary builds of OpenJDK on Linux Kernel 3.10.x or higher. The following platforms are supported:

- Arm v8 CPU with 64-bit support.
- Linux Arm 64-bit EABI.

## Supported Functionality

### Hotspot Compilers

Zulu for Arm v8 64-bit architecture supports both server (C2) and client (C1) compilers in addition to the optimized template interpreter. The following command-line options can be used to switch between the implementations:

- `-Xint` – Runs the application in interpreted-only mode.
- `-Xcomp` – Enforces compilation of methods on first invocation.
- `-Xbatch` – Disables background compilation so that compilation of all methods proceeds as a foreground task until completed.
- `-XX:[+/-]TieredCompilation` - Enables or disables the tiered compilation (enabled by default). When the tiered compilation is disabled, only the server compiler is used.
- `-XX:TieredStopAtLevel=X` -Limits the compilation level (0 - interpreted, 1 - client compiler is used only, 4 - full tiered compilation to up C2).

Refer to the extended list of the [Advanced JIT Compiler Options](#), for more information about fine-tuning the compilation behavior. For example, you can tune the compilation thresholds in order to balance the startup time and execution performance.

# Getting Started with Zulu

To start working with the Zulu perform the following steps:

## Extract the Installation Archive

- Download one of the installation archives and save it in a reasonable location on your system.
- Extract the downloaded archive:

```
$ tar -xzf zulu13.35.100-ca-jdk13.0.5.1-linux_
aarch64.tar.gz
```

- Copy the extracted directory into the following location:

```
/usr/lib/jvm
```

## Add Debug Symbols

If you do not need debug symbols, skip this step.

- Download one of the archives with the debug symbols:

```
zulu13.35.100-ca-dbg-jdk13.0.5.1-linux_aarch64.zip
```

- Copy the archive to

```
/usr/lib/jvm/zulu13.35.100-ca-jdk13.0.5.1-linux_
aarch64
```

- Extract the archive. For example,

```
$ unzip zulu13.35.100-ca-dbg-jdk13.0.5.1-linux_
aarch64.zip
```

## Verify Java Version

- Run a simple Java command:

```
$ java -version
```

If needed, provide the fully qualified path. For example:

```
$ /usr/lib/jvm/zulu13.35.100-ca-jdk13.0.5.1-linux_
aarch64/bin/java -version
```

- Inspect the system response. Correct sample output should look as follows:

```
openjdk version "13.0.5.1" 2020-11-06
```

```
OpenJDK Runtime Environment Zulu13.35+100-CA (build
13.0.5.1+1-MTS)
```

```
OpenJDK 64-Bit Server VM Zulu13.35+100-CA (build
13.0.5.1+1-MTS, mixed mode)
```

## Zulu Resolved Issues

This section summarizes JDK Common Vulnerabilities and Exposure (CVE ) fixes reflecting October, 2020 OpenJDK changes implemented for the following Zulu levels:

- Zulu 15
- Zulu 13
- Zulu 11
- Zulu 8

## JDK Common Vulnerabilities and Exposure (CVE) Fixes

### October, 2020 CVE Fixes

CVSS VERSION 3.0 RISK															
CVE #	Component	Protocol	Remote Exploit without Auth.	Base Score	Attack Vector	Attack Complex	Privs Req'd	User Interact	Scope	Confidentiality	Integrity	Availability	Supported Zulu Versions Affected	Modules Changed to Address CVE	Notes
<a href="#">CVE-2020-14803</a>	Libraries	Multiple	Yes	5.3	Network	Low	None	None	Unchanged	Low	None	None	15, 13, 11	15, 13, 11: java.base	Note 1

### October, 2020 CVE Fixes

CVSS VERSION 3.0 RISK															
CVE #	Component	Protocol	Remote Exploit without Auth.	Base Score	Attack Vector	Attack Complex	Privs Req'd	User Interact	Scope	Confidentiality	Integrity	Availability	Supported Zulu Versions Affected	Modules Changed to Address CVE	Notes
<a href="#">CVE-2020-14798</a>	Libraries	Multiple	Yes	3.1	Network	High	None	Required	Unchanged	None	Low	None	15, 13, 11, 8, 7	15, 13, 11: java.base 8, 7: JDK	Note 1
<a href="#">CVE-2020-14796</a>	Libraries	Multiple	Yes	3.1	Network	High	None	Required	Unchanged	Low	None	None	15, 13, 11, 8, 7	15, 13, 11: java.base 8, 7: JDK	Note 1

Base and Impact Metric:

Metrics	Values
Attack Vector	Network (N), Adjacent (A), Local (L), and Physical (P)
Attack Complexity	Low (L) and High (H)
Privileges Required	None (N), Low (L), and High (H)
User Interaction	None (N) and Required (R)
Scope	Unchanged (U) and Changed (C)
Confidentiality Impact	High (H), Low (L), and None (N)

Integrity Impact	High (H), Low (L), and None (N)
Availability Impact	High (H), Low (L), and None (N)

**Notes:**

ID	Notes
1	This vulnerability applies to Java deployments that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability does not apply to Java deployments, typically in servers, that load and run only trusted code (e.g., code installed by an administrator).
2	This vulnerability applies to client and server deployment of Java. This vulnerability can be exploited through untrusted code executed under Java sandbox restrictions. It can also be exploited by supplying data to APIs in the specified Component without using untrusted code executed under Java sandbox restrictions, such as through a web service.

## In-Depth Non-CVE Security Fixes

OpenJDK Patch ID	Synopsis	CPU/PSU
<a href="#">JDK-8253019</a>	Enhanced JPEG decoding	CPU
<a href="#">JDK-8249927</a>	Specify limits of <code>jdk.serialProxyInterfaceLimit</code>	CPU
<a href="#">JDK-8248574</a>	Improve jpeg processing	CPU
<a href="#">JDK-8248177</a>	Improve XML support	CPU
<a href="#">JDK-8248171</a>	Better query support	CPU
<a href="#">JDK-8245417</a>	Improve certificate chain handling	CPU
<a href="#">JDK-8245412</a>	Better class definitions	CPU
<a href="#">JDK-8245407</a>	Enhance zoning of times	CPU
<a href="#">JDK-8244955</a>	Additional Fix for JDK-8240124	CPU
<a href="#">JDK-8244479</a>	Further constrain certificates	CPU
<a href="#">JDK-8243302</a>	Advanced class supports	CPU
<a href="#">JDK-8240124</a>	Better VM Interning	CPU
<a href="#">JDK-8236196</a>	Improve string pooling	CPU
<a href="#">JDK-8233624</a>	Enhance JNI Inkage	CPU

## Other OpenJDK Bug Fixes

OpenJDK Patch ID	Synopsis	CPU/PSU
<a href="#">JDK-8253019</a>	Enhanced JPEG decoding	CPU
<a href="#">JDK-8252497</a>	Incorrect numeric currency code for ROL	PSU
<a href="#">JDK-8250609</a>	C2 crash in <code>lfNode::fold_compares</code>	PSU

OpenJDK Patch ID	Synopsis	CPU/PSU
<a href="#">JDK-8249927</a>	Specify limits of <code>jdk.serialProxyInterfaceLimit</code>	CPU
<a href="#">JDK-8249278</a>	Revert JDK-8226253 which breaks the spec of <code>AccessibleState.SHOWING</code> for <code>JList</code>	PSU
<a href="#">JDK-8248851</a>	CMS: Missing memory fences between free chunk check and class read	PSU
<a href="#">JDK-8248574</a>	Improve jpeg processing	CPU
<a href="#">JDK-8248495</a>	[macos] <code>zerovm</code> is broken due to <code>libffi</code> headers location	PSU
<a href="#">JDK-8248348</a>	Regression caused by the update to BCEL 6.0	PSU
<a href="#">JDK-8247873</a>	[arm32] client vm build failure	PSU
<a href="#">JDK-8247607</a>	Bump update version for OpenJDK: <code>jdk-13.0.5</code>	PSU
